

# system login user

To configure a user account, use the **set system login user** command in L2/L3 configuration mode. To remove a user account, use the **delete** form of the command.

## Command Syntax

```
set system login user username  
delete system login user username
```

## Parameter

<i>username</i>	The username for the new user.
-----------------	--------------------------------

## Example

This example demonstrates how to create a new user account named pica8:

```
admin@Switch# set system login user pica8
```
