

set protocols dot1x filter sequence then action

The **set protocols dot1x filter sequence then action** command configures the action for packets that match the ACL rules.

Command Syntax

set protocols dot1x filter *<filter-name>* **sequence** *<sequence-number>* **then action** **<discard | forward>**

Parameter

Parameter	Description
filter <i><filter-name></i>	Specifies the ACL filter name. The value is a string.
sequence <i><sequence-number></i>	Specifies filter sequence number. The value is an integer that ranges from 0 to 9999.
action <discard forward>	Specifies the action for packets that match the ACL rules. The value could be discard or forward . <ul style="list-style-type: none">• discard: Discard packets that match all match conditions in the same sequence number.• forward: Forward packets that match all match conditions in the same sequence number.

Example

- Configure the action for packets that match the ACL rules to discard.

```
admin@Xorplus# set protocols dot1x filter f1 sequence 2 then discard
admin@Xorplus# commit
```
