

set firewall filter sequence from source-address-ipv4

To configure a filter sequence to match packets with specified source IP address, use the **set firewall filter sequence from source-address-ipv4** command in L2/L3 configuration mode. To remove the condition from the filter sequence, use the **delete** form of the command.

Command Syntax

set firewall filter *filter-name* **sequence** *number* **from source-address-ipv4** *address/prefix-length*
delete firewall filter *filter-name* **sequence** *number* **from source-address-ipv4**

Parameters

<i>filter-name</i>	Filter name.
<i>number</i>	The filter sequence number. The range is 0-9999.
<i>address/prefix-length</i>	IPv4 address / prefix length

Examples

The following example configures sequence 1 of the *MyFilter* filter to match packets with source address 192.168.1.1:

```
admin@Switch# set firewall filter MyFilter sequence 1 from source-address-ipv4 192.168.1.1/32
```

The following example removes the condition from sequence 1 of the *MyFilter* filter:

```
admin@XorPlus# delete firewall filter MyFilter sequence 1 from source-address-ipv4
Deleting:
> source-address-ipv4: 192.168.1.1/32
OK
```
