

set system aaa radius accounting server-ip port

The **set system aaa radius accounting server-ip port** command configures port number of a RADIUS accounting server.

Command Syntax

set system aaa radius accounting server-ip *<ip_address>* **port** *<integer>*

Parameter

Parameter	Description
server-ip <i><ip_address></i>	Specifies IP address of RADIUS accounting server. The value could be an IPv4 or IPv6 address.
port <i><integer></i>	Specifies a port of a RADIUS accounting server. The value is an integer type. The default value is 1812. Note: The value of port number should be the same with that on the RADIUS servers.

Example

•Configure the port number of a RADIUS accounting server.

```
admin@XorPlus# set system aaa radius accounting server-ip 10.10.50.41 port 2
admin@XorPlus# commit
```
