

interface ecmp hash-mapping field vlan disable

In the default setting, all fields are hashed by "ip-source," "port-destination," "port-source," and "vlan." User can also enable additional fields like vlan

Command Syntax

```
set interface ecmp hash-mapping field vlan disable <bool>
delete interface ecmp hash-mapping field vlan disable
```

Parameter

• <bool> disable including the field

- **true** disable vlan
- **false** enable vlan

Example

• This example is to enable vlan:

```
admin@XorPlus# set interface ecmp hash-mapping field vlan disable false
admin@XorPlus# commit
```
