

# interface ecmp hash-mapping field ip-destination disable

---

In the default setting, all fields are hashed by "ip-source," "port-destination," "port-source," and "vlan." Users can also enable additional fields like ip-destination.

## Command Syntax

```
set interface ecmp hash-mapping field ip-destination disable <bool>
delete interface ecmp hash-mapping field ip-destination disable
```

## Parameter

• <bool> disable including the field

- **true** disable ip-destination
- **false** enable ip-destination

## Example

• This example is to enable ip-destination:

```
admin@XorPlus# set interface ecmp hash-mapping field ip-destination disable false
admin@XorPlus# commit
```
