

# set protocols dot1x filter sequence from destination-port

The **set protocols dot1x filter sequence from destination-port** command configures the destination port information of the matching packets based on the NAC-based ACL rules.

## Command Syntax

**set protocols dot1x filter** *<filter-name>* **sequence** *<sequence-number>* **from destination-port** *<port-number>*

## Parameter

Parameter	Description
<b>filter</b> <i>&lt;filter-name&gt;</i>	Specifies the ACL filter name. The value is a string.
<b>sequence</b> <i>&lt;sequence-number&gt;</i>	Specifies filter sequence number. The value is an integer that ranges from 0 to 9999.
<b>destination-port</b> <i>&lt;port-number&gt;</i>	Specifies the destination port of packets that match ACL rules. The value is an integer. It could be a port number or a range of port number, i.e. 6000; 6000..7000, which indicates port range from 6000 to 7000.

## Example

- Configure the destination port of packets that match ACL rules to 6000.

```
admin@Xorplus# set protocols dot1x filter f1 sequence 2 from destination-port 6000
admin@Xorplus# commit
```
