

set protocols ospf4 area summaries disable

User can disable the summary function on ABR.

Command Syntax

set protocols ospf4 vrf *<vrf-name>* **area** *<area-id>* **summaries disable** *<bool>*

Parameter

- *<vrf-name>* Optional. Specifies a VRF name. The value is a string. It's a user-defined VRF set by the command **set ip vrf** *<vrf-name>* [**description** *<string>*].

Note that: The configuration is in the default VRF if not explicitly bound to any VRF.

- *<area-id>* The OSPF area to which the attached network belongs.
- *<bool>* Disable summaries into stub or not-so-stubby areas. Required select include:

- **true**
- **false**

Example

- This example disable the summary function on area 1.1.1.1.

```
admin@XorPlus# set protocols ospf4 area 1.1.1.1summaries disable true
admin@XorPlus# commit
```
