

protocols rip interface vif address authentication md5 end-time

To configure the expiry time (and date) for MD5 authentication of RIP packets, use the **set protocols rip interface vif address authentication md5 end-time** command in L2/L3 configuration mode.

Command Syntax

```
set protocols rip interface interface-name vif vif-name address ip-address authentication md5 key-id end-time time
```

Parameter

<i>interface-name</i>	Interface name
<i>vif-name</i>	Virtual interface name.
<i>ip-address</i>	Virtual interface IP address for RIP.
<i>key-id</i>	MD5 authentication key identifier. The range is 0-255.
<i>time</i>	Authentication end time (and date). The format to be used is YYYY-MM-DD.HH:MM.

Example

This example configures the deadline for the MD5 authentication key used for authentication:

```
admin@Switch# set protocols rip interface vlan10 vif vlan10 address 10.1.1.1 authentication md5 1 end-time 2014-3-31.21:21
```
