

# set protocols pim ssm prefix-list

The `set protocols pim ssm prefix-list` command sets a range of group addresses via a prefix-list that forces pim to never do SM over.

## Command Syntax

```
set protocols pim [vrf<vrf-name>] ssm prefix-list <prefix-list>
```

## Parameter

Parameter	Description
<b>vrf</b> < <i>vrf-name</i> >	Optional. Specifies a VRF name. The value is a string. It's a user-defined VRF set by the command <code>set ip vrf &lt;<i>vrf-name</i>&gt; [description &lt;<i>string</i>&gt;]</code> .
<b>prefix-list</b> < <i>prefix-list</i> >	Specifies the prefix-list name. The value is a string which has been set by command <a href="#">set routing prefix-list</a> .

## Example

- Configure a range of group addresses via a prefix-list.

```
admin@Xorplus# set protocols pim ssm prefix-list PreLst1
admin@Xorplus# commit
```
